BLOCKCHAIN ENGINEERING

ASSIGNMENT - 006

Name. Shahalam

Ht.no.• 2303A510C1

Batch: 06

Problem Statement -

Develop a basic Personal Portfolio Smart Contract that stores and retrieves portfolio details (name, role, and description).

Code -

assignment6.py >

```
import tkinter as tk
from tkinter import messagebox
a# storage (simulating smart contract storage) 5          portfolio data = { }
6
 # Function to save data
 def save data() :
     name   name entry.get()
     role = role_entry.get()
     desc - desc      , tk. END) . strip()
12
                                if name and role and desc:
                                portfolio     name
                                "role"] = role
                                portfolio     desc
                                messagebox.          "portfolio saved
                                successfully") 18     else:
                     messagebox. showwarning( "Error" "All fields required")
assignment6.py > .
21       # Function to retrieve
data 22              def retrieve
data():
23        if portfolio data:
24        result      f"Name: {portfolio data['            {portfolio data[ 'role'   {portfolio data[ ' description ]}" 25
                      messagebox.showinfo("portfolio Data", result) 26          else:
27                messagebox.showwarning("Error", "No data stored")
28
29    # GUI
30    root = tk.Tk()
31    root.             portfolio Smart Contract (Simulation) ")
32    root . geometry( "              )
33
34 tk. Label (root, text="Name") .pack() 35
name entry = tk. Entry(root, width=4Ø)
36   name entry. pack()
```

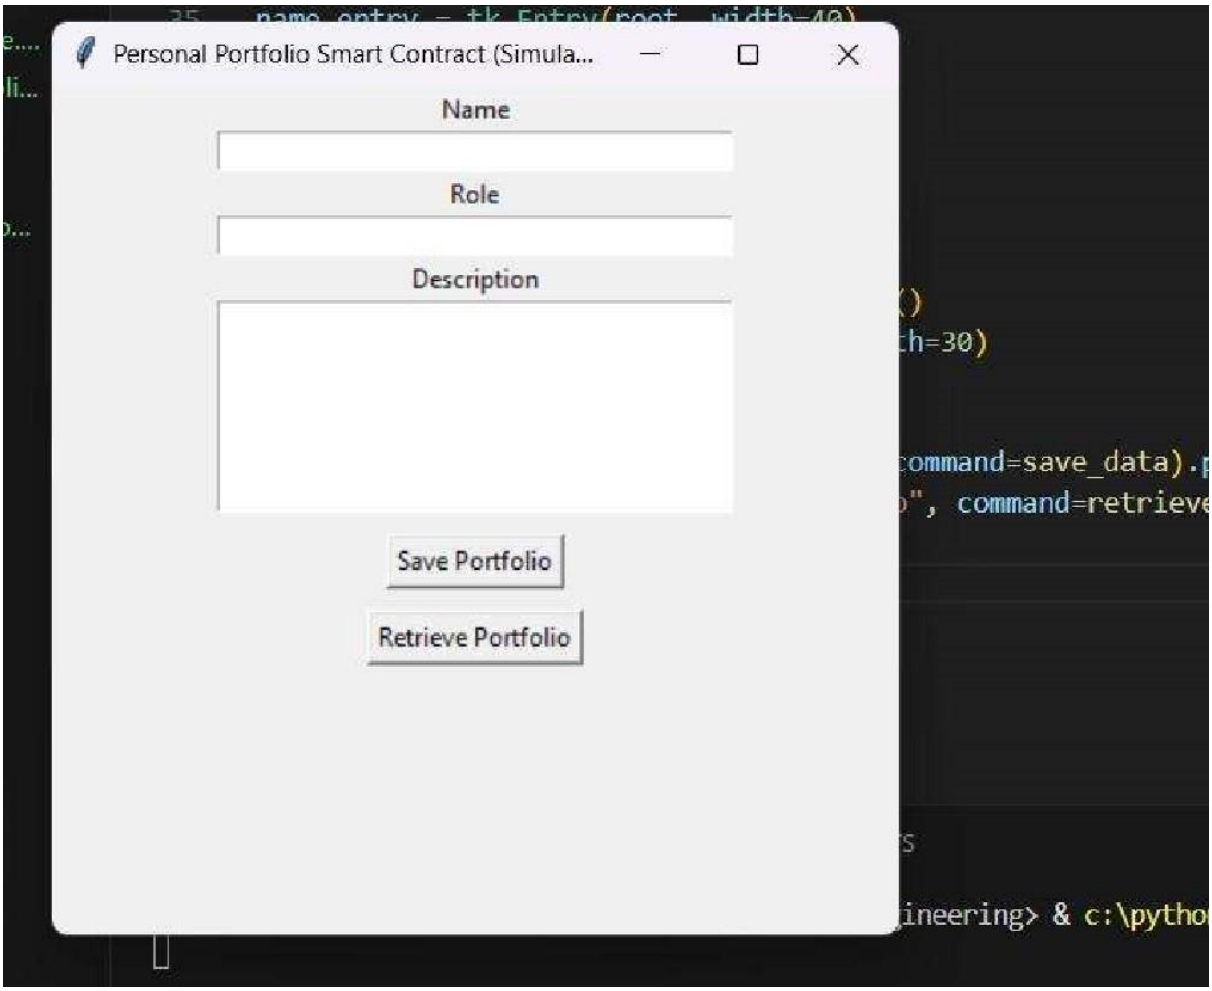
```
tk. Label (root, text-"R01e") .pack()
role entry = tk. Entry(root, width=4Ø) role entry. pack()

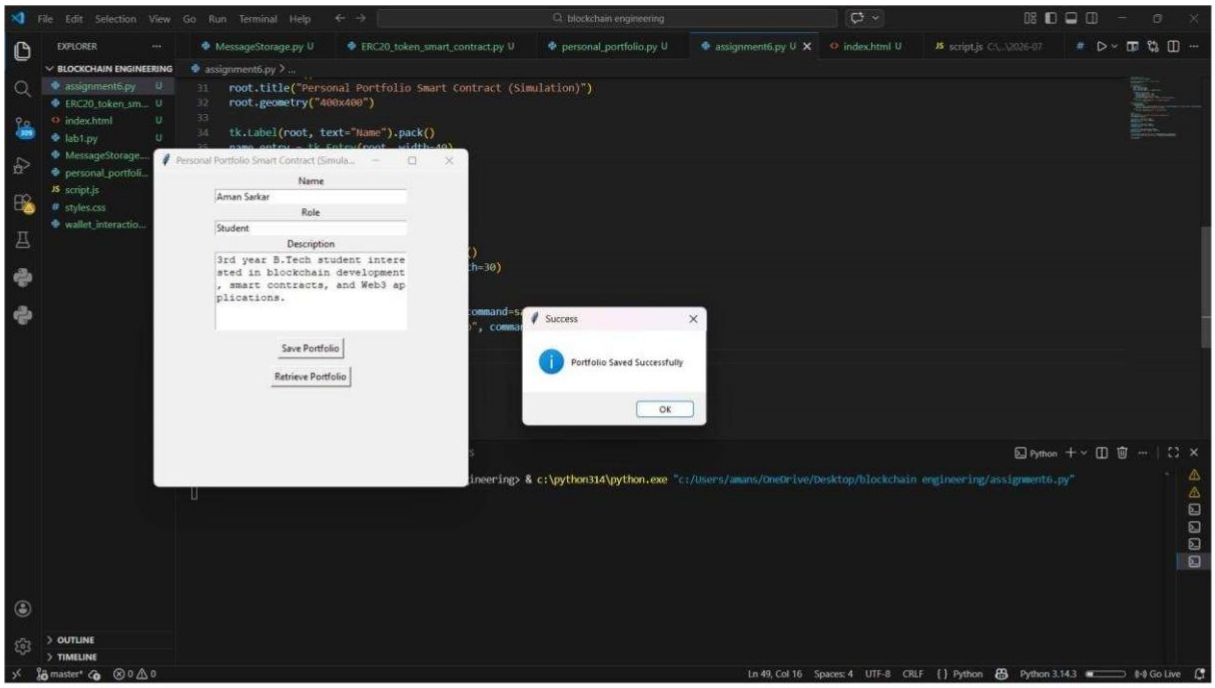
tk. Label (root, text="Description") . pack()
desc text = tk. Text(root, height=6, width=3Ø) desc text. pack()
```

```
tk.Button(root, text="Save Portfolio", command=save_data).pack(pady=10)
tk.Button(root, text="Retrieve Portfolio", command=retrieve_data).pack()

root.mainloop()
```

Output -





root.title("Personal Portfolio Smart Contract (Simulation)")
root.geometry("400x400")
tk.Label(root, text="Name").pack()
